**Asuhan Keperawatan Perioperatif Hemoroidektomi Pada Pasien Hemoroid
Di Rumah Sakit Mardi Waluyo Metro**

xv + 67 halaman, 22 tabel, 6 gambar, 7 lampiran

ABSTRAK

Hemoroid atau biasa dikenal oleh masyarakat umum dengan ambien merupakan pembesaran pada pleksus hemoroidalis. Hemoroid bukanlah penyakit yang berbahaya, tetapi jika hemoroid sudah menimbulkan keluhan, perlu penatalaksanaan lebih lanjut seperti operasi hemoroidektomi (Pembedahan). Sama halnya dengan Tindakan operasi pada umumnya ditemukan masalah keperawatan perioperatif, mulai dari tahap pre operasi, intra operasi dan post operasi, Tujuan penulisan Laporan Tugas Akhir menggambarkan pelaksanaan Asuhan Keperawatan Perioperatif Hemoroidektomi Pada Pasien Hemoroid Di Rumah Sakit Mardi Waluyo Metro. Metode asuhan keperawatan perioperatif menggunakan pendekatan proses keperawatan, sample pada pasien yang dilakukan tindakan hemoroidektomi pada kasus hemoroid, Berdasarkan hasil pengkajian dirumuskan beberapa diagnosa keperawatan sebagai berikut : pre operasi ; nyeri akut, intra operasi ; resiko perdarahan, dan post operasi ; resiko perdarahan dan nyeri akut Rencana keperawatan berdasarkan diagnosa yang telah dirumuskan, implementasi tindakan dikerjakan sesuai intervensi keperawatan yang ditetapkan secara mandiri maupun kolaborasi, sehingga tujuan rencana tindakan tercapai, Evaluasi dari setiap diagnosa keperawatan didapatkan sebagai berikut, tahap pre operasi nyeri berkurang, tahap intra operasi resiko perdarahan tidak terjadi. Tahap post operasi masalah resiko perdarahan tidak terjadi, dan nyeri akut teratasi. Saran, Diharapkan dapat melakukan prosedur asuhan keperawatan sesuai dengan standar yang berlaku sesuai dengan tahapan pengkajian, perumusan diagnosa keperawatan, pembuatan intervensi, pelaksanaan implementasi dan evaluasi baik saat pre operasi, intra operasi, maupun post operasi

Perioperative Hemorrhoidectomy Nursing Care for Hemorrhoid Patients at Mardi Waluyo Hospital Metro

xv + 67 pages, 22 tables, 6 pictures, 7 appendices

ABSTRACT

Hemorrhoids or commonly known by the general public as ambient is an enlargement of the hemorrhoidal plexus. Hemorrhoids are not a dangerous disease, but if hemorrhoids cause complaints, further management is needed, such as hemorrhoidectomy (surgery). Similar to operations, perioperative nursing problems are generally found, starting from the preoperative, intraoperative and postoperative stages. The purpose of writing this Final Project Report describes the implementation of Perioperative Hemorrhoidectomy Nursing Care for Hemorrhoid Patients at Mardi Waluyo Metro Hospital. The perioperative nursing care method uses a nursing process approach, a sample of patients undergoing hemorrhoidectomy in cases of hemorrhoids. Based on the results of the study, several nursing diagnoses were formulated as follows: preoperative; acute pain, intraoperatively; risk of bleeding, and post surgery; risk of bleeding and acute pain Nursing plans are based on diagnoses that have been formulated, implementation of actions is carried out according to nursing interventions that are determined independently or collaboratively, so that the purpose of the action plan is achieved, Evaluation of each nursing diagnosis is obtained as follows, the preoperative stage of pain is reduced, the intraoperative stage there is no risk of bleeding. In the postoperative stage, the risk of bleeding does not occur, and acute pain is resolved. Suggestion, It is hoped that nursing care procedures can be carried out in accordance with applicable standards in accordance with the stages of assessment, formulation of nursing diagnoses, making interventions, implementing and evaluating both preoperative, intraoperative, and postoperative.
