Pengelolaan Limbah Padat Pasien Covid-19 Isolasi Mandiri Di Kota Bandar Lampung Tahun 2022

xiii + 76 halaman + 5 tabel, 5 lampiran, 3 gambar.

RINGKASAN

Covid-19 merupakan penyakit yang disebabkan oleh virus yang bernama *Sars-Cov-2*, Resiko penularan tertinggi pada orang yang melakukan kontak erat pasien Covid-19. Dengan meningkatnya jumlah kasus Covid-19, pada fasyankes tempat perawatan pasien Covid-19 maupun pada tingkat rumah tangga terdapat pasien Covid-19 yang melakukan isolasi mandiri sebagai tempat perawatan pasien OTG maupun pasien Covid 19 dengan gejala ringan. Kegiatan perawatan pasien di fasyankes maupun isolasi mandiri berdampak pada peningkatan jumlah limbah medis yang signifikan, apabila tidak dikelola dengan baik akan menimbulkan masalah baru, yaitu menjadi media penularan Covid-19 bagi pekerja kebersihan yang bertugas dalam pengumpulan, pengangkutan dan pemusnahan limbah tersebut, menjadi media perkembang biakan penyakit lainnya, dan berpotensi mencemari lingkungan.

Penelitian ini bersifat deskriptif kualitatif, data diperoleh dengan melakukan wawancara terhadap informan yang berkaitan dengan pengelolaan limbah medis pasien isolasi mandiri.

Tujuan Khusus penelitian ini untuk mengetahui apakah pengelolaan limbah medis pasien Covid-19 isolasi mandiri di Kota Bandar Lampung sesuai dengan surat MenLHK Nomor : SE.3/MENLHK/PSLB3/PLB.3/3/2021, dan mengetahui tata laksana pengelolaan limbah medis padat pasien isoman di Kota Bandar Lampung pada tingkat rumah tangga di kota Bandar Lampung.

Dari hasil Penelitian, pengelolaan limbah medis pasien Covid-19 isolasi mandiri di Kota Bandar Lampung belum sesuai dengan aturan yang ada di dalam SE MenLHK No.3 Tahun 2021

Solid Waste Management for Covid-19 Patients in Independent Isolation in
Bandar Lampung City in 2022

xiii + 76 pages + 5 tables, 5 appendices, 3 pictures.

SUMMARY

Covid-19 is a disease caused by a virus called Sars-Cov-2. The risk of transmission is highest in people who have close contact with Covid-19 patients. With the increasing number of Covid-19 cases, at health facilities where Covid-19 patients are treated as well as at the household level, there are Covid-19 patients who are self-isolating as a place to treat OTG patients and Covid 19 patients with mild symptoms. Patient care activities in health facilities and self-isolation have an impact on a significant increase in the amount of medical waste, if not managed properly it will cause new problems, namely becoming a medium for transmission of Covid-19 for cleaning workers who are tasked with collecting, transporting and destroying the waste, becoming a medium for the transmission of Covid-19 breeding of other diseases, and has the potential to pollute the environment.

This research is descriptive qualitative, data obtained by conducting interviews with informants related to the management of medical waste for self-isolated patients.

The specific purpose of this study was to determine whether the management of medical waste for self-isolated Covid-19 patients in Bandar Lampung City was in accordance with the letter of the Minister of Environment and Forestry Number: SE.3/MENLHK/PSLB3/PLB.3/3/2021, and to know the management of solid medical waste. isoman patients in the city of Bandar Lampung at the household level in the city of Bandar Lampung.

From the results of the study, the management of medical waste for self-isolated Covid-19 patients in Bandar Lampung City has not been in accordance with the rules contained in the SE MenLHK No. 3 of 2021.
