**Asuhan Keperawatan Perioperatif Pada Pasien Ileus Obstruktif Dengan Tindakan Laparotomi Diruang Ok Rsud Jend.Ahmad Yani Metro Tahun 2019**

X + 71 halaman, 1 gambar, 12 tabel dan lampiran

**ABSTRAK**

Asuhan keperawatan laporan kasus ini dilakukan pada pasien dengan diagnosa medis ileus obstruktif . Ileus adalah gangguan (apapun penyebabnya) aliran normal isi usus sepanjang saluran usus . Obstruksi usus dapat akut dengan kronik, partial atau total. Obstruksi usus biasanya mengenai kolon sebagai akibat karsinoma dan perkembangannya lambat . Tujuan laporan ini, penulis menggambarkan pelaksanaan asuhan keperawatan perioperatif pada pasien ileus obstruktif dengan tindakan laparotomi. Metode asuhan keperawatan menggunakan pendekatan proses keperawatan, sampel pada pasien Ny.Y dengan diagnosa medis ileus obstruktif.

Berdasarkan hasil pengkajian dirumuskan beberapa diagnosa keperawatan sebagai berikut: pre operasi; ansietas, intra operasi; resiko perdarahan dan post operasi; hipotermi. Rencana keperawatan yang ditetapkan berdasarkan diagnosa keperawatan yang dirumuskan. Implementasi tindakan dikerjakan sesuai intervensi keperawatan yang ditetapkan pada Ny.Y secara mandiri maupun kolaborasi dalam tim operasi sehingga tujuan rencana tindakan tercapai. Evaluasi dari setiap diagnosa keperawatan didapatkan sebagai berikut, tahap pre operasi masalah ansietas teratasi sebagian. Tahap intra operasi masalah risiko perdarahan Teratasi sebagian. Tahap post masalah hipotermi teratasi sebagian. Saran, Diharapkan dapat melakukan prosedur asuhan keperawatan sesuai dengan standar yang berlaku sesuai dengan tahapan pengkajian, perumusan diagnosa keperawatan, pembuatan intervensi keperawatan , pelaksanaan implementasi dan evaluasi baik saat pre operasi, intra operasi , maupun post operasi .

***Perioperative Nursing Care at Patients Obstructive Ileus with Laparotomy Measures in the Operating Room Jend.Ahmad Yani Hospital Metro 2019***

*Xviii + 71 pages, 1 images, 12 tables and attachments*

**ABSTRACT**

*Nursing care for this case report is performed on patients with a medical diagnosis of obstructive ileus. Ileus is a disorder (whatever the cause) normal flow of intestinal contents along the intestinal tract. Bowel obstruction can be acute with chronic, partial or total. Intestinal obstruction usually affects the colon as a result of carcinoma and its development is slow. The purpose of this report, the authors describe the implementation of perioperative nursing care in obstructive ileus patients with laparotomy. Nursing care method uses a nursing process approach, the sample is in Mrs.Y patients with obstructive ileus medical diagnosis.*

*Based on the results of the study several nursing diagnoses were formulated as follows: preoperatively; anxiety, intraoperative; risk of bleeding and post surgery; hypothermia. The nursing plan is determined based on the nursing diagnoses that are formulated. The implementation of the action was carried out according to the nursing intervention determined by Mrs.Y independently or in collaboration in the operations team so that the objectives of the action plan were achieved. Evaluation of each nursing diagnosis is obtained as follows, the preoperative stage of the anxiety problem is partially resolved. Intraoperative stage of the problem of bleeding risk Partially resolved. The post-stage hypothermic problem is partially resolved. Suggestions, It is expected to be able to carry out nursing care procedures in accordance with applicable standards in accordance with the stages of assessment, formulation of nursing diagnoses, making nursing interventions, implementing implementation and evaluation both pre-operative, intra-operative, and post-operative*
