Relationship between Employee Behavior and Covid-19 Prevention at the Long
Class II Port Health Office in 2022

xvii+ 73 pages, 10 tables, 4 pictures and 5 attachments

ABSTRACT

Corona virus disease (COVID-19) is an infectious disease caused by the recently discovered corona virus. The virus that causes COVID-19 is mainly transmitted through droplets. Based on initial data, the employees of the Panjang Class II Port Health Office were confirmed positive for Covid-19 and 32 employees were not confirmed positive for Covid-19, 74 employees with a total of 106 employees.

The research was carried out at the Port Health Office Class II Panjang in May 2022. The research method was a cross-sectional study and a sample of 106 people consisting of 32 employees who were confirmed positive for Covid-19 and 74 employees who were not confirmed positive for Covid-19.

The results of the study showed that there was a relationship between employee behavior and efforts to prevent the covid-19 virus at the Class II Panjang 2022 Port Health Office with the ratio of the prevalence of knowledge about covid-19 at the Panjang Class II Port Health Office ($RP = 0.23 < 1$). there is a relationship between employee behavior and efforts to prevent the covid-19 virus at the Port Health Office Class II Panjang 2022 with the ratio of the prevalence of attitudes about covid-19 at the Port Health Office Class II Panjang ($RP = 0.43 < 1$), there is no relationship between employee behavior and efforts to prevent the covid-19 virus at the Class II Panjang Port Health Office 2022 with the ratio of the prevalence of prevention efforts regarding covid-19 at the Class II Panjang Port Health Office ($RP = 0.79 < 1$)

It is recommended that employees are expected to always comply with and implement health protocols with the 5M movement, further increasing education to employees about the importance of preventing the spread.
