ABSTRACT

Handover is a process of transferring or transferring important information for holistic and safe patient nursing care which aims to ensure that the services provided by each nurse are mutually sustainable. Nursing documentation is an important element in nursing services where there are demands high responsibility for any given action. The purpose of this study was to determine the relationship between handover and nursing documentation in the surgical ward at the Abul Moloek General Hospital, Lampung Province. This study uses a quantitative research type, with a cross sectional design. The sampling technique used total sampling, namely the entire population was sampled. The population of this study were all nurses who served in the operating room.

The results of the univariate analysis are known from 41 respondents who answered complete handovers, namely 30 people (73.2%) and 11 people who answered incompletely (26.8%) and nursing documentation was known from 41 complete respondents, namely 31 people (75.6%) and 10 people answered incompletely (24.4%). The results of the square test p-value 0,00 ($\alpha < 0,05$) then H_1 is accepted and H_0 is rejected, meaning that there is a relationship between Handover and nursing documentation in the surgical ward at Dr. Hospital. H. Abdul Moeloek, Lampung Province in 2022
