Asuhan Keperawatan pasien dengan gangguan rasa aman nyaman : nyeri pada kasus post operasi amputasi ulkus diabetikum terhadap Tn.S di Ruang Bedah RSUD Jendral Ahmad Yani Metro tanggal 07-09 November 2022

xvi + 64 halaman, 7 tabel, 1 gambar

RINGKASAN

Ulkus diabetikum disebabkan karena meningkatnya hiperglikemia yang kemudian menyebabkan terjadinya kelainan neuropati dan pembuluh darah. Adanya ulkus yang terinfeksi maka kemungkinan terjadinya tindakan amputasi menjadi lebih besar. Setelah dilakukan tindakan pembedahan akan muncul masalah baru yaitu nyeri akibat pembedahan. Maka rumusan masalah bagaimana asuhan keperawatan dengan post operasi amputasi pada kasus ulkus diabetikum terhadap Tn.S

Tujuan penulisan laporan tugas akhir ini adalah penulis mampu memberikan gambaran Asuhan Keperawatan post operasi amputasi ulkus diabetikum terhadap Tn.S di Ruang Bedah RSUD Jendral Ahmad Yani Metro tanggal 07-09 november 2022

Pengkajian terhadap pasien yang berisikan tentang identitas pasien dan data hasil pengkajian pasien, diagnosa keperawatan menurut teori tidak semua muncul karena disesuaikan dengan kondisi pasien saat pengkajian. Diagnosa yang sesuai yaitu nyeri akut, risiko infeksi, risiko defisit nutrisi. Rencana keperawatan yaitu manajemen nyeri, pencegahan infeksi, dan perawatan luka, manajemen nutrisi dibuat melalui pemilihan sesuai dengan label yang dipilih. Evaluasi keperawatan dilaksanakan setiap hari sesuai teori proses keperawatan dan dapat disimpulkan bahwa masalah keperawatan teratasi.

Kesimpulan dari laporan ini bahwa tidak semua teori proses keperawatan post operasi amputasi sesuai dengan kondisi pasien pada kenyataannya, karena disesuaikan dengan kondisi dan kebutuhan pasien. Saran dari laporan ini diharapkan dapat menjadi bahan masukan dalam asuhan keperawatan bagi perawat di Ruang Bedah RSUD Jendral Ahmad Yani Metro dan menambah literature kepustakaan bagi mahasiswa Poltekkes Prodi Keperawatan Kotabumi.

Nursing care of patients with impaired sense of security and comfort: pain in postoperative cases of amputation of diabetic ulcers of Tn.S in the operating room of General Ahmad Yani Metro Hospital on 07-09 November 2022

Xvi+ 64 pages, 7 tables, 1 picture

ABSTRACT

Diabetic ulcers are caused by increased hyperglycemia which then causes neuropathy and vascular disorders. If the nicus is infected, the possibility of amputation is greater. After surgery, a new problem will appear, namely pain due to surgery. Sothe formulation of the problem is how to provide nursing care with post operative amputation in cases of diabetic ulcers to Tn.S

The purpose of writing this final project report is that the author is able to provide postoperative nursing care for amputation of diabetic ulcers to Tn.S in the operating room of General Ahmad Yani Metro Hospital on 07-09 November 2022

Assessment of the patient which contains the patient's identity and data on the results of the patient's assessment, nursing diagnoses according to theory do not all appear because they are adjusted to the patient's condition during the assessment. The appropriate diagnoses are acute pain, risk of infection, risk of nutritional deficits. Nursing plans, namely pain management, infection prevention, and wound care, nutritional management are made through selection according to the chosen label. Nursing evaluations are carried out every day according to the theory of the nursing process and it can be concluded that the nursing problems are resolved.

The conclusion from this report is that not all theories of the postoperative amputation nursing process are in accordance with the patient's actual condition, because they are adapted to the patient's condition and needs. The suggestions from this report are expected to be input into nursing care for nurses in the Surgery Room of Jendral Ahmad Yani Metro Hospital and add to the library literature for Poltekkes Nursing Study Program students in Kotabumi.
