Hubungan Pengetahuan Dan Keterampilan Perawat *Perioperatif* Dengan Pelaksanaan Pendidikan Kesehatan Pada Proses *Discharge Planning* Di RSUD Dr. H. Abdul Moeloek Provinsi Lampung Tahun 2022
(xvi+52 halaman, 4 tabel, 2 gambar, 8 lampiran)

ABSTRAK

Pelaksanaan discharge planning sangat penting bagi keberlangsungan perawatan kesehatan, dan menjadi suatu implementasi yang harus dilaksanakan oleh perawat dengan baik, Permasalahannya masih banyak implementasi *discharge planning* di rumah sakit di Indonesia masih dengan kategori cukup (83,24%). Tujuan penelitian ini adalah mengetahui hubungan pengetahuan dan keterampilan perawat *perioperatif* dengan pelaksanaan pendidikan kesehatan pada proses *discharge planning*. Penelitian ini menggunakan desain cross sectional. Teknik sampling menggunakan *total sampling* dengan sampel perawat di ruang bedah sebanyak 35. Uji statistik menggunakan uji *chi square*. Hasil analisa univariat didapatkan pengetahuan *discharge planning* perawat *perioperatif* yaitu pengetahuan baik sebanyak 24 responden (68,6%). Keterampilan *discharge planning* yaitu keterampilan baik sebanyak 20 responden (57,1%). Pelaksanaan pendidikan kesehatan yaitu pendidikan kesehatan baik sebanyak 23 responden (65,7%). Nilai *p-value* 0.01 (<0.05) yang artinya terdapat hubungan pengetahuan *discharge planning* perawat *perioperatif* dengan pelaksanaan pendidikan kesehatan. Berdasarkan uji statistik didapatkan hasil *p-value* (0.00) $< \alpha$ (0,05), hal ini dapat disimpulkan bahwa hubungan pengetahuan dan keterampilan perawat *perioperatif* dengan pelaksanaan pendidikan kesehatan pada proses *discharge planning*. Di harapkan terus meningkatkan pengetahuan tentang pelaksanaan metode pendidikan kesehatan pada discharge planning dengan mengikuti seminar maupun workshop tentang kesehatan agar dapat meningkatkan pelayanan asuhan keperawatan yang optimal.

Kata Kunci : Pengetahuan, Keterampilan *Discharge Planning*, Pendidikan Kesehatan

The Relationship between Knowledge and Skills of Perioperative Nurses with the Implementation of Health Education in Procces with Discharge Planning at RSUD Dr. H. Abdul Moeloek, Lampung Province in 2022

(xvi+52 pages, 4 tables, 2 images, 8 attachments)

ABSTRACT

The implementation of discharge planning is very important for the continuity of health care, and is an implementation that must be carried out by nurses well. The problem is that many discharge planning implementations in hospitals in Indonesia are still in the adequate category (83.24%). The aim of this research is to determine the relationship between the knowledge and skills of perioperative nurses and the implementation of health education in the discharge planning process. This research uses a cross sectional design. The sampling technique used total sampling with a sample of 35 nurses in the operating room. Statistical tests used the chi square test. The results of the univariate analysis showed that 24 respondents (68,6%) had good knowledge of perioperative nurse discharge planning. Discharge planning skills are good skills for 20 respondents (57.1%). The implementation of health education, namely good health education, was 23 respondents (65.7%). The p-value is 0.01 (<0.05), which means there is a relationship between perioperative nurses' knowledge of discharge planning and the implementation of health education. Based on statistical tests, the results obtained were p-value (0.00) < α (0.05), it can be concluded that there is a relationship between the knowledge and skills of perioperative nurses and the implementation of health education in the discharge planning process. It is hoped that we will continue to increase knowledge about the implementation of health education methods in discharge planning by attending seminars and workshops on health in order to improve optimal nursing care services.
