Overview Of Sanitation Facilities In Gedong Tataan Elementary Schools
Pesawaran Regency In 2024

xvi+ 65 Pages, 7 Tables, 3 Figures, and 4 Attachments

ABSTRACT

School is a gathering place for students and school residents in teaching and learning activities. Most of the children's time is spent in the school environment. Therefore, a safe, comfortable and healthy environment is very necessary to support the teaching and learning process. School sanitation facilities include clean water, school latrines, CTPS, liquid waste management and waste management.

The aim of the research is to find out the description of basic sanitation facilities in elementary schools in Gedong Tataan District, Pesawaran Regency in 2024. Research method This type of research is descriptive in nature where the researcher describes the condition of sanitation facilities at State Elementary Schools in Gedong Tataan District, Pesawaran Regency. Researchers used a total sample of 23 State Elementary Schools in Gedong Tataan District, Pesawaran Regency, collecting data using checklists and questionnaires.

The results of this research are that it is concluded that Sanitation Facilities for Elementary Schools in Gedong Tataan District, Pesawaran Regency in 2024 include clean water, 22 (95%) schools have met the requirements and 1 (5%) elementary school has not met the requirements. Toilets were separated between men and women in 4 (17.3%) elementary schools and latrines were not separated between men and women in 19 (82.6%) elementary schools. Hand washing facilities with soap (CTPS) are available in 16 (69.5%) elementary schools where hand washing facilities with soap are available in the classrooms, canteens, latrines and in 7 (30.4%) there are no hand washing facilities. Liquid waste management, namely 20 (86.9%) elementary schools have carried out routine suction and 3 (13%) have not carried out suction. Waste management: 18 (78.2%) elementary schools have rubbish bins in each classroom, have covers, rubbish is transported and waste management is carried out every day and 5 (21.7%) existing rubbish bins do not meet the requirements.
