Pengaruh Perilaku Menyikat Gigi Teknik Kombinasi Terhadap Penurunan Plak Indeks Pada Anak Sekolah Dasar.

Xiii + 43 halaman, dan 1 tabel.

ABSTRAK

Kesehatan merupakan bagian terpenting dalam kehidupan manusia, baik sehat secara jasmani maupun rohani tidak terkecuali kesehatan anak-anak. Kesehatan yang perlu diperhatikan selain kesehatan tubuh secara umum, juga kesehatan gigi dan mulut. Menyikat gigi merupakan salah satu cara untuk memelihara kesehatan gigi dan mulut. Bagi anak, cara menyikat gigi perlu diberikan contoh model dan teknik yang sebaik mungkin, sehingga mampu berpengaruh dalam membersihkan plak yang ada di rongga mulut. Tujuan penelitian ini adalah untuk mengetahui pengaruh menyikat gigi teknik kombinasi terhadap penurunan plak indeks pada anak sekolah dasar. Berdasarkan data yang diperoleh dari jenis penelitian studi pustaka dengan metode penelitian analisis isi, didapatkan 3 jurnal yang memiliki keterkaitan dengan pengaruh menyikat gigi teknik kombinasi terhadap penurunan plak indeks pada anak sekolah dasar.

KATA KUNCI : menyikat gigi, teknik kombinasi, dan plak indeks.

Effect Of Combined Tooth Brushing Technique On Plaque Index Reduction In
Primary School Children

Xiii + 43 pages, and 1 table.

ABSTRACT

Health is the most important part of human life, both physically and spiritually healthy, including the health of children. Health that needs to be considered is in addition to general body health, as well as oral and dental health. Brushing your teeth is one way to maintain healthy teeth and mouth. For children, how to brush their teeth needs to be given examples of the best possible models and techniques, so that they can be influential in cleaning plaque in the oral cavity. The purpose of this study was to determine the effect of combined technique brushing on the reduction of plaque index in elementary school children. Based on the data obtained from the type of literature study research with the content analysis research method, there were 3 journals that were related to the effect of brushing teeth combined with the reduction of plaque index in elementary school children.

KEY WORDS : brushing teeth, combination techniques, and index plaque
