ABSTRACT

The pain before childbirth is normal. Pain that is increasing and disrupting activity can be pathological because of the worry / anxiety felt by the mother. In PMB Ina Juli there is Mrs. E with a pregnancy age of 38 weeks who experiences pain complaints before childbirth during the active phase I.

The method in collecting data on this case study uses varney method in SOAP documentation, observation and interview on the subject, namely Mrs. E with a pregnancy age of 38 weeks that is at the time of active phase I and Muslims with cases of pain before childbirth during the active phase I. By applying murottal therapy of the Al-Quran and the dzikir of the prophet Yunus AS. Conducted according to the SOP attached on February 27, 2021.

After the treatment of pain before childbirth to Mrs. E at the time of the active phase I obtained the results shown through the scale of the picture that the pain experienced by Mrs. E decreased from a scale of 6 (disrupting activity) to a scale of 2 (a little pain) at the first time. Based on the results of the interview after the intervention "somewhat reduces the pain." Mrs. E said. The final result of this pain intensity from Mrs. E's experienced is decreased from 6,5 to 4,0.

Based on the care that has been given to Mrs. E at PMB Ina Juli A., Amd.Keb is the application of murottal therapy of the Al-Quran and dzikir with the prayer of Prophet Yunus AS. goes well and can help reduce the pain ahead of childbirth during the active phase I.
