**Hubungan Tingkat Pengetahuan Perawat Dengan Upaya Penerapan
Keselamatan Pasien Di Instalasi Bedah Sentral RSUD Jenderal Ahmad
Yani Metro Provinsi Lampung Tahun 2021**

xvii + 47 halaman + 8 tabel + 2 gambar + 10 lampiran

ABSTRAK

Keselamatan pasien merupakan prioritas utama dalam pelayanan rumah sakit dan untuk menjamin kepercayaan masyarakat dengan memaksimalkan pelayanan kesehatan. Laporan insiden keselamatan di Indonesia menurut Gunawan, 2017 kasus yang terjadi di wilayah Jakarta sebesar 37,9%, Jawa Tengah 15,9%, Yogyakarta 13,8%, Jawa Timur 11,7%, Sumatera Selatan 6,9%. Di rumah sakit Bandar Lampung sebesar 20,1 % (Yanti, Armi 2019). Salah satu faktor yang mempengaruhi dalam upaya penerapan keselamatan pasien adalah pengetahuan perawat, dimana semakin tinggi tingkat pengetahuan yang dimiliki perawat maka akan semakin tinggi atau semakin baik tindakannya dalam menerapkan keselamatan pasien (Imam, 2016). Penelitian ini bertujuan untuk mengetahui hubungan pengetahuan perawat dengan upaya penerapan keselamatan pasien di instalasi bedah sentral RSUD Jendral Ahmad Yani Metro.

Desain penelitian ini menggunakan *Cross Sectional* dengan menggunakan teknik *non probabilitas sampling* dengan metode *total sampling*. Populasi dalam penelitian dengan perhitungan sample perawat yang bekerja di Ruang Instalasi Bedah Sentral didapatkan sebanyak 33 orang. Analisis yang digunakan yaitu *spearman's coefficient of rank*. Waktu penelitian dimulai bulan Juli 2021 di Ruang instalasi bedah sentral RSUD Jend. Ahmad Yani Metro.

Hasil penelitian ini didapatkan nilai *p value* 0.002 yang berarti *p value* < 0.05 menunjukkan ada hubungan tingkat pengetahuan perawat dengan upaya penerapan keselamatan pasien di Ruang Instalasi Bedah Sentral RSUD Jenderal Ahmad Yani Kota Metro.

ABSTRACT

Patient safety is a top priority in hospital services and to ensure trust with the community by maximizing health services. Reports of safety incidents in Indonesia according to Gunawan, 2017 cases that occurred in the Jakarta area were 37.9%, Central Java 15.9%, Yogyakarta 13.8%, East Java 11.7%, South Sumatra 6.9%. At the Bandar Lampung hospital it was 20.1% (Yulnani, Vera 2018). One of the factors that influence the effort to implement patient safety is the knowledge of nurses, where the higher the level of knowledge possessed by nurses, the higher or better their actions in implementing patient safety (Imam, 2016). This study aims to determine the Relations Of The Nurse's Knowledge Level With The Application Of Patients' Safety At The Central General Hospital Ahmad Yani, Metro City.

The design of this study was cross sectional using a non-probability sampling technique with a total sampling method. The population in this study was the sample counting of nurses working in the Central Surgical Installation Room was obtained as many as 33 people. The analysis used is Spearman's coefficient of rank. The time of the study began in July 2021 in the Central Surgical Installation Room at General Hospital of Jend. Ahmad Yani Metro.

The results of this study obtained a p value of 0.002 which means p value < 0.05 indicating that there is a relationship between the level of knowledge of nurses and efforts to implement patient safety in the Central Surgical Installation Room of General Ahmad Yani Hospital, Metro City.

Keywords: Knowledge Level, Application , *Patient safety*.
