Nursing Care Circulation Disorders in Post Partum Hemorrhage Cases Against Mrs.B in Midwifery Room, Mayjend HM Ryacudu Hospital Kotabumi North Lampung

xviii + 58 pages, 5 tables, 1 diagram

**ABSTRACT**

WHO estimates 5.29,000 maternal deaths each year, India contributes 25.7% of maternal deaths worldwide (1.36,000 maternal deaths / year), the average incidence in government hospitals is 79.5%, while in hospitals private sector at 21.23% With the presence of post partum hemorrhage causing hypovolemia in the mother so, that patients tend to be weak, pale and have decreased blood pressure. Based on the background, the formulation of the problem in this Final Project Report is: The formulation of the problem in this case study report is “What is Nursing Care for Patients with Circulatory Disorders in Post Partum Bleeding Cases?”

The general purpose of this Final Project Report is to provide a description of Nursing Care for Circulatory Disorders Needs in the Post Partum Hemorrhage case against Mrs. B in the Midwifery Room of the Mayjend Hospital HM Ryacudu Kotabumi, North Lampung.

The results of the assessment in this case the client said feeling weak, the client complained of thirst, low Hb value of 8, the pulse frequency increased 130x / min, the peripheral pulse felt weak, blood pressure decreased 70 / 60mmHg, skin turgor decreased, body temperature increased 38.5°C , client has decreased consciousness (E2V4M2 GCS 8, Delirium awareness level), low oxygen saturation (SpO2 85%),

weakened pulse, palpable acral cold, CTR> 3 seconds, client's face looks pale, low breathing frequency, blood transfusion 3 recommended bag. Nursing diagnoses that are established by hypovolemia, and the risk of shock. Nursing planning and actions are carried out in accordance with SLKI fluid status, shock level and SIKI management of hypovolemia, shock prevention. After taking nursing action on Mrs. B for 3 days the patient's problem is resolved.

The conclusion from this paper is not all that there is in the literature review found in Mrs. B with circulation disorders in cases of post partum hemorrhage. Suggestions Mayjend HM HM Ryacudu Kotabumi North Lampung Hospital can improve service quality by paying attention to client needs, prioritizing hospitality to patients and their families, collaborative actions in caring for patients such as teaching how to control the bleeding experienced by clients to facilitate the performance of nurses in caring for clients

Keywords: Nursing care post partum bleeding disorders
