ABSTRAK

Kanker kolon merupakan penyakit kanker ganas ketiga terbanyak di dunia dan untuk bisa dilakukan operasi ini harus menunggu waktu yang lama. Tujuan LTA ini untuk melaksanakan asuhan keperawatan perioperatif pada pasien Tumor Colon dengan tindakan Hemikolektomi di RSUD.Dr.H Abdul Moeloek Provinsi Lampung Tahun 2022. Metode yang digunakan yaitu case report. Fokus asuhan keperawatan perioperatif ini mencakup tiga tahapan yaitu, pre-operatif, intraoperasi, dan post-operatif. Subjek laporan yaitu satu orang pasien dewasa dengan diagnosa Tumor Colon. Asuhan keperawatan di lakukan di RSUD.Dr.H Abdul Moeloek Provinsi Lampung pada tanggal 07-10 Juni 2022. Data mayor saat pre operasi: pasien mengeluh nyeri, pasien tampak meringis dan gelisah, pasien khawatir dengan akibat yang akan dialaminya, pasien tampak tegang. Data mayor yang didapatkan saat intra operasi: perdarahan sebanyak 350 cc. Data mayor saat post operasi: kulit teraba dingin, T: 36,3°C, pasien mengeluh nyeri dan kekuatan otot menurun. Diagnosa keperawatan yang didapatkan sebagai berikut: pre operasi: nyeri kronis dan ansietas; intra operasi: risiko perdarahan; post operasi: risiko hipotermia perioperatif, nyeri akut dan gangguan mobilitas fisik. Intervensi keperawatan meliputi manajemen nyeri, reduksi ansietas, pencegahan perdarahan, manajemen hipotermi, dan dukungan mobilisasi. Evaluasi menunjukkan keluhan nyeri berkurang, skor ZSAS menurun, membran mukosa lembab, tidak terjadinya perdarahan berlebih, suhu tubuh membaik dan mobilisasi pasien meningkat. Setiap diagnosa keperawatan menunjukkan hasil sesuai dengan yang diharapkan sehingga disimpulkan terdapat keberhasilan pemberian asuhan keperawatan pada pasien.

ABSTRACT

Colon cancer is the third most common malignant cancer in the world and to be able to do this surgery have to wait a long time. The purpose of this LTA is to carry out perioperative nursing care for Colon Tumor patients with Hemicolectomy at RSUD.Dr.H Abdul Moeloek, Lampung Province in 2022. The method used is a case report. The focus of perioperative nursing care includes three stages, namely, pre-operative, intraoperative, and post-operative. The subject of the report is one adult patient with a diagnosis of Colon Tumor. Nursing care was carried out at RSUD.Dr.H Abdul Moeloek Lampung Province on 07-10 June 2022. Major data during pre-operation: the patient complained of pain, the patient looked grimaced and restless, the patient was worried about the consequences that would be experienced, the patient looked tense. Major data obtained during intraoperative: bleeding as much as 350 cc. Major data postoperatively: skin feels cold, T: 36.3'C, the patient complains of pain and decreased muscle strength. The nursing diagnoses obtained were as follows: preoperative: chronic pain and anxiety; intraoperative: risk of bleeding; postoperative: risk of perioperative hypothermia, acute pain and impaired physical mobility. Nursing interventions include pain management, anxiety reduction, bleeding prevention, hypothermia management, and mobilization support. Evaluation showed reduced pain complaints, decreased ZSAS scores, moist mucous membranes, no excessive bleeding, improved body temperature and increased patient mobilization. Each nursing diagnosis shows the results as expected so that it is concluded that there is success in providing nursing care to patients
