**UPAYA MENINGKATKAN PELAYANAN KESEHATAN GIGI DI
PUSKESMAS PADA MASA PANDEMI COVID-19**

xiii + 49 halaman dan 2 gambar

ABSTRAK

Pandemi COVID-19 adalah penyebab terganggunya akses masyarakat dalam mendapat pelayanan kesehatan. Rasa takut masyarakat akan tertular Virus COVID-19 menjadi penyebab akses pelayanan kesehatan terhadap masyarakat tersebut menjadi terganggu. Penelitian ini bertujuan untuk mengetahui upaya dalam meningkatkan pelayanan kesehatan gigi di puskesmas pada masa pandemi COVID-19. Metode penelitian adalah studi kepustakaan (Library Reserch). Pencarian literature dilakukan dengan menggunakan beberapa database antara lain Google Scholar, Google Books yang berkaitan dengan “Upaya Meningkatkan Pelayanan Kesehatan gigi di Puskesmas pada Masa Pandemi COVID-19”. Hasil penelitian ini berdasarkan studi kepustakaan penelitian terdahulu di dapatkan bahwa upaya dalam meningkatkan pelayanan kesehatan gigi di puskesmas pada masa Pandemi COVID-19 adalah dengan mengubah alur pendaftaran yaitu melakukan proses triase/skrining dahulu sebelum masyarakat mendapatkan pelayanan, kemudian melengkapi sarana dan prasarana Puskesmas, lalu memanfaatkan media informasi dan komunikasi (Teledentistry) sebagai sarana konsultasi online bagi masyarakat atau menggunakan media sosial seperti Facebook, instagram, dll untuk mengedukasi dan membagikan informasi seputar pelayanan kesehatan sehingga masyarakat tetap mendapatkan pelayanan kesehatan gigi di masa pandemi COVID-19.

ABSTRACT

The COVID-19 pandemic is the cause of the disruption of public access to health services. The public's fear of contracting the COVID-19 virus is the cause of disrupted access to health services for the community. This study aims to determine the efforts to improve dental health services at puskesmas during the COVID-19 pandemic. The research method is literature study (Library Research). The literature search was carried out using several databases, including Google Scholar, Google Books related to "Efforts to Improve Dental Health Services at Public Health Centers during the COVID-19 Pandemic". The results of this study based on previous research literature studies, it was found that efforts to improve dental health services at the puskesmas during the COVID-19 pandemic were to change the registration flow, namely to carry out a triage/screening process before the community received services, then complete the facilities and infrastructure of the Puskesmas, then utilizing information and communication media (Teledentistry) as a means of online consultation for the community or using social media such as Facebook, Instagram, etc. to educate and share information about health services so that people continue to receive dental health services during the COVID-19 pandemic.

Key words : COVID-19 Pandemic, Health Service, Public health center
