**Asuhan Keperawatan Perioperatif pada Pasien Mall Union Fraktur dengan Tindakan Aff Plate dan Screw di Ruang Bedah RS. DKT Provinsi Lampung Tahun 2019**

Xix + 63 halaman, 2 gambar, 10 tabel dan lampiran

**ABSTRAK**

Asuhan keperawatan laporan kasus ini dilakukan pada pasien dengan diagnosa medis mall union fraktur. Malunion adalah penyambungan yang tidak sesuai dengan posisi yang semestinya, seperti angulasi, overlapping dan rotasi. Dikarnakan tidak tereduksinya fraktur secara cukup, kegagalan mempertahankan reduksi ketika terjadi penyembuhan, atau kolaps yang berangsur-angsur pada tulang yang osteoporotik atau kominutif. kejadian malunion sebagai komplikasi fraktur mencapai 50% dari semua jenis fraktur ekstremitas yang terjadi akibat salah pengobatan. Salah satu cara penanganan malunion fraktur distal adalah pembedahan ortopedi Tujuan laporan ini, penulis menggambarkan pelaksanaan asuhan keperawatan perioperatif pada pasien mall union fraktur dengan tindakan *aff plate* dan *screw*. Metode asuhan keperawatan menggunakan pendekatan proses keperawatan, sampel pada pasien Tn. J dengan diagnosa medis Mall Union Fraktur tibia sinistra.

Berdasarkan hasil pengkajian dirumuskan beberapa diagnosa keperawatan sebagai berikut: pre operasi; Nyeri dan ansietas, intra operasi; resiko hipotermi dan post operasi; resiko hipotermi. Rencana keperawatan yang ditetapkan berdasarkan diagnosa keperawatan yang dirumuskan. Implementasi tindakan dikerjakan sesuai intervensi keperawatan yang ditetapkan pada Tn.J secara mandiri maupun kolaborasi dalam tim operasi sehingga tujuan rencana tindakan tercapai. Evaluasi dari setiap diagnosa keperawatan didapatkan sebagai berikut, tahap pre operasi masalah nyeri teratasi sebagian dan ansietas teratasi sebagian. Tahap intra operasi masalah risiko hipotermi tidak terjadi. Tahap post operasi masalah resiko hipotermi tidak terjadi. Saran, Diharapkan dapat melakukan prosedur asuhan keperawatan sesuai dengan standar yang berlaku sesuai dengan tahapan pengkajian, perumusan diagnosa keperawatan, pembuatan intervensi keperawatan , pelaksanaan implementasi dan evaluasi baik saat pre operasi, intra operasi , maupun post operasi .

***Perioperative Nursing Care in Union Mall Fracture Patients with Aff Plate and Screw Actions in the Operating Room of the Hospital. Lampung Province DKT 2019***

*Xix + 63 pages, 2 images, 10 tables and attachments*

**ABSTRACT**

*Nursing care for this case report is performed on patients with a mall union fracture medical diagnosis. Malunion is a connection that is not in accordance with its proper position, such as angulation, overlapping and rotation. Due to insufficient reduction of the fracture, failure to maintain reduction during healing, or gradual collapse in osteoporotic or cominutive bone. the incidence of malunion as a complication of fractures reaches 50% of all types of limb fractures that occur due to wrong treatment. One of the ways to manage distal malunion fracture is orthopedic surgery. The aim of this report, the authors describe the implementation of perioperative nursing care in mall union fracture patients with aff plates and screws. The nursing care method uses the nursing process approach, the sample is in the patient Mr. J medical diagnosis with the Mall Union Tibia Sinestra fracture.*

*Based on the results of the study, several nursing diagnoses were formulated as follows: preoperative; Pain and anxiety, intra-operation; risk of hypothermia and post surgery; risk of hypothermia. The nursing plan is determined based on the nursing diagnoses that are formulated. The implementation of the action was carried out according to the nursing intervention determined by Mr.J independently or in collaboration with the operations team so that the objectives of the action plan were achieved. Evaluation of each nursing diagnosis is obtained as follows, the preoperative stage of the pain problem is partially resolved and anxiety is partially resolved. Intraoperative stage hypothermic risk problems do not occur. The postoperative stage of hypothermic risk problems does not occur. Suggestions, It is expected to be able to carry out nursing care procedures in accordance with applicable standards in accordance with the stages of assessment, formulation of nursing diagnoses, making nursing interventions, implementing implementation and evaluation both during preoperative, intraoperative, and postoperative.*
