ABSTRAK

Berdasarkan data yang diperoleh dari *International Diabetes Federal (IDF)*, terdapat 382 juta orang penderita Diabetes didunia pada tahun 2013. Pada tahun 2015 jumlah tersebut diperkirakan akan meningkat menjadi 592 jiwa penderita Diabetes (Info DATIN, 2014). Tujuan penelitian ini adalah menggambarkan pelaksanaan Asuhan Keperawatan Post Operasi Diabetes Mellitus Dengan Tindakan *Debridement* Dengan Masalah Keperawatan Gangguan Integritas Kulit di Rumah Sakit Mardi Waluyo Metro. Jenis penelitian deskriptif dengan pendekatan study kasus yang dibentuk *single case* dimana peneliti mengeksplorasi suatu masalah dengan dibatasi oleh waktu, tempat yang dipelajari berupa peristiwa, aktivitas atau individu. Metode pengumpulan data menggunakan lembar format asuhan keperawatan rawat post operasi yang meliputi pengkajian, diagnosa keperawatan, serta evaluasi tindakan dan lembar pengkajian luka *Bates Jensen Wound Assesment Tools (BWAT)*. Penelitian menggunakan 1 pasien hasil dari asuhan keperawatan didapatkan yaitu Gangguan integritas kulit. Setelah dilakukan ashan keperawatan didapatkan terjadinya penurunan skor luka dari 28 menjadi 22 setelah dilakukan perawatan *moist wound healing* menggunakan minyak zaitun.

Kata Kunci : Gangguan Integritas Kulit, *Debridement*, Post Operasi Diabetes Mellitus

ABSTRACT

Based on data obtained from the International Diabetes Federal (IDF), there were 382 million people with diabetes in the world in 2013. In 2015, this number is expected to increase to 592 people with diabetes (Info DATIN, 2014). The purpose of this study was to describe the implementation of Postoperative Diabetes Mellitus Nursing Care with Debridement Actions with Skin Integrity Disorders Nursing Problems at Mardi Waluyo Metro Hospital. This type of research is descriptive with a case study approach formed by a single case where the researcher explores a problem limited by time, the place studied in the form of events, activities or individuals. The method of data collection used a postoperative outpatient nursing care format sheet which included assessment, nursing diagnoses, and action evaluation and the Bates Jensen Wound Assessment Tools (BWAT) wound assessment sheet. Research using 1 patient results from nursing care obtained, namely impaired skin integrity. After the nursing assistant was carried out, it was found that there was a decrease in the wound score from 28 to 22 after the moist wound healing treatment was carried out using olive oil.
