ABSTRAK

Data persalinan *sectio caesarea* di wilayah provinsi Lampung yang tercatat di dinas kesehatan provinsi Lampung 2018 mencapai 13,2% persalinan (Rikesdas,2018). Persalinan dengan *sectio caesarea* di RSIA Restu Bunda Kota Bandar Lampung sebesar 50 per bulannya. Sebanyak 40 (80%) dari 50 orang melakukan mobilisasi dini post *sectio caesarea* (Rahmawati, 2021). Tujuan penelitian mengetahui hubungan pengetahuan dan dukungan keluarga terhadap mobilisasi dini pada pasien post operasi *sectio caesarea* di RSIA Restu Bunda Kota Bandar Lampung Tahun 2024. Metode penelitian analitik survei non eksperimen pendekatan *cross sectional*. Jumlah sampel 40 responden, waktu penelitian 19 Februari-19 Maret 2024. Hasil uji statistik *chi-square* variabel pengetahuan *p value* = 0,013 dan variabel dukungan keluarga *p value* = 0,002 hal ini menunjukkan bahwa ada hubungan yang bermakna antara pengetahuan dan dukungan keluarga terhadap mobilisasi dini pada pasien post operasi *sectio caesarea* di RSIA Restu Bunda Kota Bandar Lampung Tahun 2024. Diharapkan pasien yang telah memperoleh edukasi tentang mobilisasi dini dapat melaksanakan tahapan mobilisasi dini dengan baik dan benar.

ABSTRACT

Data on cesarean delivery in the Lampung province area was recorded at the Lampung Provincial Health Office in 2018 reaching 13.2% of deliveries (Risksedas, 2018). Delivery by *sectio caesarea* at RSIA Restu Bunda Bandar Lampung City is 50 per month. As many as 40 (80%) out of 50 people carried out early mobilization post *sectio caesarea* (Rahmawati, 2021). The purpose of the study is to determine the relationship between knowledge and family support for early mobilization in postoperative *sectio caesarea* patients at RSIA Restu Bunda Bandar Lampung City in 2024. Non-experimental survey analytical research method cross sectional approach. The sample size was 40 respondents, the research time was February 19-March 19, 2024. The results of the chi-square statistical test of the knowledge variable p value = 0.013 and the family support variable p value = 0.002 this shows that there is a meaningful relationship between knowledge and family support for early mobilization in postoperative *sectio caesarea* patients at RSIA Restu Bunda Bandar Lampung City in 2024. It is hoped that patients who have received education about early mobilization can carry out the early mobilization stages properly and correctly.

Keywords : Knowledge & family support, Mobilization, Post *sectio caesarea*
