*Description of Appropriate Storage of Medicines
At the Wonosobo Health Center and Siring Betik Health Center
Wonosobo District Tanggamus Regency in 2024*

XVIII + 67 pages, 5 tables, 6 figures, 14 appendices

ABSTRACT

Storing medicines and consumable medical materials is an activity to regulate the medicines received so that they are safe (not lost), protected from physical and chemical damage and the quality is guaranteed. Damage to medicines not only has a negative impact on patients but also on the health service facility itself. A Health Service Facility is a place used to provide health service efforts, whether promotive, preventive, curative or rehabilitative, carried out by the government, regional government and/or the community. Community Health Center, hereinafter referred to as Puskesmas, is a health service facility that carries out public health efforts and first-level individual health efforts, by prioritizing promotive and preventive efforts in its working area.

This study aims to determine the level of suitability of drug storage, the arrangement of drugs in storage rooms and the requirements for drug warehouses at the Siring Betik Health Center and Wonosobo Health Center, Wonosobo District, Tanggamus Regency in 2024 with an observation sheet using the standards of the Republic of Indonesia Minister of Health Regulation No. 74 of 2016 concerning pharmaceutical service standards in Community Health Centers and Directorate General of Pharmaceutical Development and Medical Devices 2010 Concerning Pharmaceutical Management Training Materials at Community Health Centers. This research method uses a quantitative descriptive design with a sampling technique using saturated sampling with a standard number of points of 34 points. The results of the research on the suitability of drug storage at the Siring Betik health center were 100% and at the Wonosobo health center 100%, on the arrangement of medicines in the storage room at the Siring Betik health center 94% and at the Wonosobo health center 100%, on the drug warehouse requirements for the Siring Betik health center 85% and the Wonosobo health center 85% and the results the overall percentage was 94% for the Siring Betik health center and 97% for the Wonosobo health center.
