**HUBUNGAN SIKAP ANAK TERHADAP TERJADINYA KARIES GIGI
DEF-T PADA ANAK TK INTAN PERTIWI**

xxv + 25 Halaman, 3 tabel, 3 gambar dan 10 Lampiran.

ABSTRAK

Latar Belakang : Karies gigi adalah kerusakan jaringan keras yang berada pada area tertentu pada permukaan gigi dan disebabkan oleh hilangnya struktur jaringan keras gigi sebagai akibat dari timbunan asam yang ditimbulkan oleh penumpukan bakteri plak pada permukaan gigi.

Tujuan Penelitian : Untuk mengetahui hubungan sikap orangtua terhadap terjadinya karies gigi def-t pada anak Tk Intan Pertiwi.

Metode Penelitian : Jenis penelitian deskriptif, Teknik pengambilan sampel dalam penelitian ini *sampling total* sehingga didapat sampel sebanyak 30 orang.

Hasil Penelitian : Berdasarkan hasil penelitian sikap orangtua pada anak tk intan pertiwi, sikap orang tua menunjukan positif sebesar (80%) dan kategori sikap negatif hanya (20%). Hasil penelitian kriteria deft sangat rendah sebesar (60,0%), kriteria deft rendah dan sangat tinggi di persentase yang sama (13,3%), tinggi (10,1%) sedang hanya (3,3%). Berdasarkan uji chi square didapatkan hasil statistic dengan nilai sig 0,001 maka dapat disimpulkan H_0 ditolak dan H_a diterima, Hal ini menunjukan terdapat hubungan antara sikap orangtua terhadap karies pada anak di Tk Intan Pertiwi.

Kesimpulan : Orangtua di Tk Intan Pertiwi memiliki hubungan sikap tentang karies gigi, dengan kategori sikap positif sebanyak 80%. Kejadian karies gigi deft pada anak Tk Intan Pertiwi mempunyai kriteria anak yang terkena karies gigi sangat rendah 18 (60,0%).

**THE RELATIONSHIP OF CHILDREN'S ATTITUDE TO THE
OCCURRENCE OF DEF-T DENTAL CAREIES IN INTAN PERTIWI
KINDERGARTEN CHILDREN**

xxv + 25 Pages, 3 tables, 3 figures and 10 Attachments.

ABSTRACT

Background: Dental caries is damage to hard tissue that occurs in certain areas on the surface of the teeth and is caused by loss of the hard tissue structure of the teeth as a result of acid deposits caused by the buildup of plaque bacteria on the surface of the teeth.

Research Objective: To determine the relationship between parental attitudes and the occurrence of dental caries in Intan Pertiwi Kindergarten children.

Research Method: Descriptive research type. The sampling technique in this research was total sampling so that a sample of 30 people was obtained.

Research Results: Based on the results of research on parental attitudes towards Intan Pertiwi Kindergarten children, parental attitudes showed a positive attitude of (80%) and a negative attitude category of only (20%). The research results for very low deft criteria were (60.0%), low and very high deft criteria in the same percentage (13.3%), high (10.1%) and medium only (3.3%). Based on the chi square test, statistical results were obtained with a sig value of 0.001, so it can be concluded that H_0 was rejected and H_a was accepted. This shows that there is a relationship between parents' attitudes towards caries in children at Intan Pertiwi Kindergarten.

Conclusion: Parents at Intan Pertiwi Kindergarten have a positive attitude regarding dental caries, with a positive attitude category of 80%. The incidence of dental caries in Intan Pertiwi Kindergarten children has very low criteria for children affected by dental caries, 18 (60.0%).
