Gambaran Minat Mahasiswa Dalam Memilih Jurusan Teknik Gigi Di Politeknik
Kementerian Kesehatan Tanjungpinang

Xiv + 34 halaman + 11 tabel + 1 gambar + lampiran

RINGKASAN

Minat berperan penting dalam pencapaian kompetensi dan pemilihan karier. Minat merupakan kondisi psikologis yang menunjukkan ketertarikan terhadap suatu objek atau aktivitas. Minat juga dipengaruhi oleh faktor internal dan eksternal seperti persepsi, motivasi, sikap, dan lingkungan sosial.

Penelitian ini bertujuan mengetahui gambaran minat mahasiswa dalam memilih jurusan Teknik Gigi di Politeknik Kementerian Kesehatan Tanjungpinang. Penelitian menggunakan pendekatan kuantitatif dengan survei deskriptif terhadap seluruh mahasiswa Teknik Gigi tahun 2025 sebanyak 105 mahasiswa, melalui total sampling dan kuesioner berskala nominal. Data dianalisis secara univariat.

Hasil menunjukkan 71,43% mahasiswa memiliki minat tinggi, didukung oleh sikap positif (94,29%), persepsi positif (87,62%), motivasi tinggi (87,62%), dan dukungan sosial (79,05%). Hasil ini menunjukkan minat dipengaruhi oleh kombinasi faktor internal dan eksternal. Disarankan agar institusi meningkatkan promosi jurusan dan memberikan pembinaan bagi mahasiswa yang kurang berminat. Mahasiswa yang sudah berminat diharapkan terus mengembangkan diri, dan calon mahasiswa disarankan aktif mencari informasi tentang jurusan dan prospek kariernya.

A Study On Student's Interest In Choosing The Dental Technician Program At
The Ministry Of Health Polytechnic, Tanjungkarang

Xiv + 34 pages + 11 tables + 1 figure + 1 appendix

ABSTRACT

Interest plays an important role in achieving competence and choosing a career path. It is a psychological condition that reflects an individual's attraction to a particular object or activity. Interest is influenced by both internal and external factors, such as perception, motivation, attitude, and social environment.

This study aims to describe students' interest in choosing the Dental Technician program at the Health Polytechnic of the Ministry of Health in Tanjungkarang. A quantitative approach was used with a descriptive survey involving all 105 Dental Technician students in 2025 through total sampling and a nominal-scale questionnaire. Data were analyzed using univariate analysis.

The results showed that 71.43% of students had a high level of interest, supported by positive attitudes (94.29%), positive perceptions (87.62%), high motivation (87.62%), and social support (79.05%). These findings indicate that student interest is influenced by a combination of internal and external factors. It is recommended that the institution enhance the promotion of the program and provide guidance for students with lower interest levels. Students who are already interested are encouraged to continue developing their competencies, while prospective students are advised to actively seek information about the program and its career prospects.
