**HUBUNGAN USIA DAN RIWAYAT KELUARGA DENGAN KEJADIAN
KANKER PAYUDARA DI RSUD JENDERAL AHMAD YANI TAHUN 2025**
(xvii+ 43 halaman, 2 gambar, 10 tabel dan 14 lampiran)

ABSTRAK

Menurut WHO (2024) pada tahun 2022 terdapat 670.000 kematian dan 2,3 juta wanita yang terdiagnosis kanker payudara di seluruh dunia. Jumlah kasus baru kanker payudara di Indonesia mencapai 68.858 kasus atau 16,6% dari total 396.914 kasus baru dan jumlah kematian mencapai lebih dari 22 ribu jiwa (Kemenkes RI, 2022). Jumlah pasien kanker di RSUD Jenderal Ahmad Yani tahun 2024 sebanyak 2749. Tujuan penelitian untuk mengetahui hubungan usia dan riwayat keluarga dengan kejadian kanker payudara di RSUD Jenderal Ahmad Yani Tahun 2025. Penelitian ini penelitian kuantitatif menggunakan desain *cross sectional*. Sampel penelitian ini 99 responden. Penelitian ini dilakukan pada 30 April – 22 Mei 2025 serta menggunakan uji statistik *chi square*. Hasil penelitian menunjukkan adanya hubungan usia dengan kejadian kanker payudara dengan nilai (*p-value 0,016*) dan ada hubungan riwayat keluarga dengan kejadian kanker payudara dengan nilai (*p-value 0,000*) Sehingga disimpulkan terdapat hubungan usia dan riwayat keluarga dengan kejadian kanker payudara di RSUD Jenderal Ahmad Yani Tahun 2025. Penelitian ini dapat menjadi informasi dalam bidang kesehatan khususnya terkait faktor usia dan riwayat keluarga di RSUD Jenderal ahmad Yani.

**THE RELATIONSHIP BETWEEN AGE AND FAMILY HISTORY WITH
THE INCIDENCE OF BREAST CANCER AT JENDERAL AHMAD YANI
HOSPITAL IN 2025.**

(xvii + 43 pages, 2 figures, 10 tables, and 14 appendices)."

ABSTRAK

According to WHO (2024), in 2022, there were 670,000 deaths and 2.3 million women diagnosed with breast cancer worldwide. The number of new breast cancer cases in Indonesia reached 68,858, accounting for 16.6% of the total 396,914 new cases, with more than 22,000 deaths reported (Kemenkes RI, 2022). The number of cancer patients at RSUD Jenderal Ahmad Yani in 2024 was 2,749. The aim of this study is to investigate the relationship between age and family history with the incidence of breast cancer at RSUD Jenderal Ahmad Yani in 2025. This research is a quantitative study using a cross-sectional design. The sample size for this study is 99 respondents. The research was conducted from April 30 to May 22, 2025, and utilized the chi-square statistical test. The results indicate a significant relationship between age and the incidence of breast cancer, with a p-value of 0.016, and a significant relationship between family history and the incidence of breast cancer, with a p-value of 0.000. Therefore, it can be concluded that there is a relationship between age and family history with the incidence of breast cancer at RSUD Jenderal Ahmad Yani in 2025. This study can provide valuable information in the field of health, particularly regarding the factors of age and family history at RSUD Jenderal Ahmad Yani.

Keywords: Breast Cancer, Age, Family History
