ABSTRAK

Keselamatan pasien merupakan prioritas utama dalam pelayanan kesehatan, terutama di ruang bedah yang memiliki risiko tinggi terhadap kejadian tidak diinginkan. Pengetahuan perawat memegang peran penting dalam mencegah insiden keselamatan pasien. Penelitian ini bertujuan untuk Mengetahui hubungan antara pengetahuan perawat dengan penerapan keselamatan pasien di ruang bedah RSUD Jenderal Ahmad Yani Metro tahun 2025. Jenis Penelitian ini merupakan penelitian kuantitatif dengan pendekatan analitik *cross sectional*. Sampel penelitian adalah 43 perawat ruang bedah yang dipilih secara total sampling. Instrumen yang digunakan berupa kuesioner dan lembar uji pengetahuan. Data dianalisis menggunakan uji *Chi-square*. Diperoleh hasil bahwa mayoritas perawat memiliki tingkat pengetahuan baik (55,8%) dan menerapkan keselamatan pasien (58,1%). Terdapat hubungan signifikan antara pengetahuan perawat dengan penerapan keselamatan pasien dengan nilai $p = 0,012$ ($p < 0,05$). Disarankan adanya pelatihan dan peningkatan kapasitas pengetahuan perawat guna meningkatkan mutu keselamatan pasien di rumah sakit.

**THE RELATIONSHIP BETWEEN NURSES' KNOWLEDGE AND THE
IMPLEMENTATION OF PATIENT SAFETY IN THE SURGICAL ROOM OF
GENERAL AHMAD YANI GENERAL HOSPITAL, METRO IN 2025**

xvii + 40 pages, 8 tables, 2 figures, 9 appendices

ABSTRACT

Patient safety is a top priority in healthcare, especially in the operating room which has a high risk of adverse events. Nurses' knowledge plays an important role in preventing patient safety incidents. This study aims to determine the relationship between nurses' knowledge and the implementation of patient safety in the operating room of General Ahmad Yani Metro Hospital in 2025. This type of research is a quantitative study with a cross-sectional analytical approach. The research sample was 43 operating room nurses selected by total sampling. The instruments used were questionnaires and knowledge test sheets. Data were analyzed using the Chi-square test. The results showed that the majority of nurses had a good level of knowledge (55.8%) and implemented patient safety (58.1%). There was a significant relationship between nurses' knowledge and the implementation of patient safety with a p value = 0.012 ($p < 0.05$). It is recommended that training and increasing the knowledge capacity of nurses be carried out to improve the quality of patient safety in hospitals.

Keywords: Nurse knowledge, patient safety, operating room
